Prod. of substd. 3,4-diaminothieno(2,3-b) pyrroles of formula (I) is carried out by reacting substd. 2,4-diaminothioph-carbonitriles of formula (II) with acceptor-substd. halomethanes of the formula X-CH<sub>2</sub>-R<sub>1</sub> (III) in a solvent (DMF) at 60-150 deg.C in presence of bases, the bases pref. being K<sub>2</sub>CO<sub>3</sub> followed by NEt<sub>3</sub>. In the formulae, R<sub>1</sub> is aryl or allyl. R<sub>2</sub> and R<sub>3</sub> are alkoxycarbonyl, acyl, nitrile or carbamido gps. X is Cl or Br.

(I) (and unsubstd. 3,4-diaminothieno(2,3-b) pyrroles) are new cpds.

(I) are obtd. by a simple process. They are useful as intermediates esp. for dyestuffs.
